

acking

(A loud bang happens.)

Ticopria.

GENERAL DAN'H: What was that?

J'AN JAH: We're going through an asteroid belt.

GENERAL DAN'H: Let's hope this old ship of ours can keep it together.

there?

MIKAH MONOCH: Boarding enemy craft.

s.

J'AN JAH: We should be there in less than twenty macrobreks.

E-V: Could you help me out here?

good
on this.

LC-4: Yes. You should definitely keep throwing yourself against that transparent blast shield because it really seems to be effective.

l me if this
st sentient

E-V: Why are you even in here?

ld help her.

LC-4: What do you mean?

g device.

E-V: Why are you here? You're a robot. Can't they just, ya know, make more of you?

LC-4: Can't they just make more of you?

E-V: I hate to tell ya this, robot, but it takes two to tango to make more humans. It's not as simple.

FINISH
→

LC-4: And it takes a facility of the universe's most brilliant engineers to build even the most rudimentary versions of me. I do not see your point.

E-V: I'm alive.

LC-4: And you're suggesting I'm not.

E-V: Well, yeah.

LC-4: There are over three million different species in the universe and not any two are composed of the same genetic compounds, yet no one argues against any one of their statures for being living sentient creatures.

However, because robots are partially made with non-organic materials such as metal and steel, somehow you believe I'm less than alive. Why is that? Why do you insist on thinking that I'm less than you.

E-V: That's not what I mean.

LC-4: Then what are you suggesting when you say I'm not alive.

(Silence)

E-V: I'm sorry, okay.

LC-4: You're apologizing?

E-V: Yeah.

LC-4: To me? But I'm a robot.

E-V: I know that.

LC-4: You are a most fascinating creature.

E-V: Even though I'm human?

...ially because you are human.

...: kind of robot are you?

...obot robot.

...n, what kind of function did you serve?

...e functions, right?
